SOUTH AFRICA · EST. 2026

ARMenu

See your food.
Before they order.

THE PROBLEM WITH MENUS

Your menu is **your biggest sales tool.** *And it* **is doing nothing.**

Every guest picks their meal from a printed list of names and hopes for the best. The kitchen bears the weight of every returned plate, every 'not what I thought' moment, every dish that photographed better in the guest's head than on their table.

73%

of diners want to see a photo — or better, a preview — before ordering an unfamiliar dish.

30%

of first-time orders end in 'I will try something else next time.' That guest rarely comes back.

Ro

of every table's basket goes back to the restaurant if the guest doesn't feel confident ordering more.

> *The dish appears on the table before it ever leaves the kitchen.*
>
> THE ARMENU EXPERIENCE

HOW IT WORKS

Four taps. *Zero friction.*

No app to download. No account to create. No waiter to wave down. Your guest scans a QR code on their table and, in less than three seconds, is standing your entire menu on their tablecloth.

1

Scan

Guest opens their phone camera at any ARMenu table QR. The menu loads instantly. No download. No sign-in.

2

Preview

Tap any dish. Watch it appear, life-size, on your actual table. Rotate it. See the portion. Understand exactly what you are ordering.

3

Order

Tap add. The kitchen sees the ticket the second the guest confirms. Waiter's board updates. Every station knows what is coming.

4

Enjoy

Live status pings the guest's phone from prep to ready. They know exactly when their food is on its way.

ON THE GUEST'S PHONE

Under 3s

From QR scan to the full menu rendered, ready to browse. On any smartphone, on any network — even patchy 3G.

FOR YOUR KITCHEN

Instant

Orders appear on the kitchen board the moment the guest taps Order. Each station only sees the dishes it is cooking.

WHY RESTAURANTS WIN WITH ARMENU

More than **a menu.** *A dining machine.*

ARMenu isn't a nicer PDF or a QR-code shortcut to a website. It's a full operating layer that connects guest, kitchen, waiter and owner in real time — and turns your menu from a static list into your highest-performing salesperson.

+20%

Higher average order value

Guests who see the dish are more likely to add sides, upgrade portions and try new items. Visual menus consistently lift order size across the industry.

0%

Zero commission on orders

We are not a marketplace. Every rand your guest spends goes to your restaurant. We charge a flat platform fee — not a cut of your revenue.

Ro

No app required

Your guest never downloads anything. It runs in their phone's browser. Works on iPhone, Android, old Samsung, borrowed device — anything with a camera.

You

You own every guest

Every order, every profile, every review lives in your data. Not ours to sell, not a walled garden. Your operation, your intelligence.

FOR YOUR GUESTS

An experience that **keeps them coming back.**

Everything a diner secretly wishes for — from the moment they scan to the moment they leave a review — built to feel effortless, personal and

Life-size AR preview of every dish
Rotate, walk around, see the real portion size before ordering.

Heart your favourite dishes
One tap saves a dish. Guests build a personal shortlist across your entire menu.

Order-again pill after each visit
The moment they walk back in, "Same again?" appears at the top — a single tap and they are re-ordered.

One-tap Vegan mode
Along with Halal, GF, Dairy-Free, Nut-Free and Vegetarian filters — dietary needs shouldn't be a conversation.

Compare up to three dishes side by side
Torn between the ribeye and the sirloin? See both, together, with prices and details.

Live chat with the restaurant
"Do you have oat milk?" — answered by staff on their console in seconds.

Call waiter or request bill in one tap
No arm-waving. The waiter's screen lights up with the table's request.

Cross-restaurant recommendations
'Guests who loved your calamari also loved...' — bringing new dishes into every visit.

Auto-detects their browser language
Menus in Afrikaans, isiZulu, Portuguese, French, German — whatever their phone speaks.

Personal profile that follows them
Favourites, allergies, dietary preferences remembered across every ARMenu restaurant they ever visit.

"My usual" saved combos
Regulars save their go-to order and reload it in one tap next visit.

Live wait-time estimates
Guests see how busy your kitchen is right now, and roughly how long their food will take.

Advanced fuzzy search
Typing "chiken burgar" still finds the chicken burger. Guests never hit a dead end.

Group ordering from one table
One guest starts, everyone else joins by scanning the invite QR. Everyone adds their own dishes.

Live order status on their phone
Order received > Kitchen preparing > Ready > Enjoy — with a gentle chime at each stage.

Photo reviews from real diners
Approved guest photos appear on dish cards — proven social proof.

Save any AR scene to their camera roll
Instagram-ready. Free marketing, every time.

Beautiful welcome-back moment
'Welcome back, Sarah — your last favourite was the Signature Burger.' Small touch. Massive loyalty.

FOR YOUR KITCHEN

Speed, clarity, never a missed order.

Built for the chaos of a busy Friday. Every ticket lands on the right screen at the right station, colour-coded by urgency, with allergen alerts you cannot

Multi-station routing
Hot, Cold, Dessert, Expo — each screen shows only its own tickets. Chaos becomes calm.

Age colours that pulse harder as time passes
Green > amber > red. Nothing sits forgotten. Nothing gets missed.

Impossible-to-miss modifier chips
"No onions" flashes amber. Allergies pulse red. No excuse for missing a critical detail.

Server-shared plated ticks
Multiple kitchen tablets stay in sync — mark an item done on one, it is done on all.

Rush mode auto-activates
When 5+ orders arrive in 5 minutes, a red banner appears and chimes speed up.

Offline detection
If the kitchen tablet loses connection for even 15 seconds, a red banner appears. No silent failures.

Prep sheet auto-generated for tomorrow
Based on the last four weeks of same-weekday orders. Print it. Done.

Course-grouped tickets
Starters, Mains, Desserts visually separated on every ticket so plating pace is obvious at a glance.

Live timer on every order
MM:SS ticking on the top-right of each ticket. Kitchen sees exactly how long each order has been open.

Bump-bar keyboard shortcuts
1-9 marks items done. Enter marks the order ready. No touching a screen with wet hands.

Voice announcements
"New order, table five." Optional, opt-in, so nothing gets missed during a rush.

Recall to kitchen
A waiter can send a served order back if there is an issue — with a reason logged.

Auto-marks dishes sold out
Track stock per dish — when it hits zero, the guest menu marks it sold out automatically.

Kitchen station QR login cards
Print once, stick on the tablet. Any staff scans to log in.

FOR YOUR WAITERS

Every table, every request, **every moment visible.**

Your service floor at a glance. Which tables are ordering. Which are waiting. Which need the bill. Which have been sitting too long.

Live floor heatmap
Grid of every table, colour-coded: green idle, blue ordering, amber waiter called, red bill requested, purple stale.

Waiter-to-table assignment
Assign each table to a specific server so guests know who is looking after them.

Split-bill by item or evenly
Per-item assignment for group tables. Even split for quick departures. Partial payment tracking.

Recall an order to kitchen
Something wrong? Send it back with a reason — kitchen sees it immediately.

Rush indicator in the header
When the kitchen is slammed, waiters know to pace pours and check-ins accordingly.

Bill requests appear the instant a guest taps
Red pulse, chime, notification — impossible to miss.

Live chat with any guest
Guests ask questions from their phone. Waiter replies from the console.

Walk-in and waitlist queue
Add parties as they arrive. Live wait-time estimates. Seat or mark no-show with one tap.

Order sounds that survive kiosk sleep
Chimes still fire even when the tablet's audio has been suspended. Notifications back them up.

Auto-review request 2 hours after served
The guest gets a gentle push notification asking to rate their dishes. Free five-star reviews on autopilot.

FOR YOU, THE OWNER

The clarity you never had.

Live numbers, deep analytics, staff visibility, menu control, and every scheduling headache handled in one place. Run your restaurant from your

Live "today" dashboard
Orders, revenue, average prep time, top-selling dish — updating throughout service.

Deep analytics
Revenue chart, day×hour heatmap, dish leaderboard, category performance, guest retention by cohort.

Slow-kitchen alerts
If average prep time creeps above target during service, you get a banner. Catch problems before guests do.

Staff performance report
Orders handled per waiter. Average time to ready. Tips collected. Print it, run a fair house.

Auto-generated prep sheet for tomorrow
Based on how much of each dish sold on the same weekday for the last four weeks.

Time-of-day menu rotation
Breakfast dishes vanish at 11. Lunch appears. Dinner takes over at 17:00. Automatic.

Bulk CSV import for dishes and staff
Onboard a full menu in minutes, not days. Handles messy files, warns about problems.

Menu preview before publish
See exactly what your guests will see, before it goes live. Test in private.

Custom-designed QR codes
Your logo baked into the QR. Print on tent-cards, stickers, receipts.

Command palette (Ctrl+K)
Every action in the portal, one keyboard shortcut away. Runs like a modern operating system.

Peer benchmarking
See how you compare against the South African platform average. Are you in the top 10%?

Menu heatmap over the calendar
See exactly which days boomed, which dishes drove them, and which new items landed with a bang.

Daily takings emailed at 10pm
Every night, a one-page summary of the day arrives in your inbox.

Staff shift scheduling
Weekly grid, print white-labelled with your restaurant's branding. No more WhatsApp roster chaos.

Loyalty program you control
Ten stamps for a free dish of your choice. Opt-in, opt-out, or change the reward whenever.

Menu combos with savings badges
Bundle three dishes for a set price. The guest sees the saving. Basket size climbs.

Four view-optimised menu templates
Steakhouse, Italian, Cafe, Pub — each engineered to guide guest eyes and lift orders.

Duplicate a whole restaurant in one click
Opening a second branch? Copy the entire menu, categories, tables and stations in seconds.

Notification badges site-wide
Red-dot counts for new orders, waitlist entries, unresponded chats, pending reviews.

Full audit log
Every change, every action, every actor, every IP — searchable.

GROWTH & DISCOVERY

More diners. **Every week.**

Your ARMenu listing doesn't just serve the diners already sitting down. It brings you new ones through the platform's own discovery layer — while search-engine optimisation keeps working in the background.

Featured on ARMenu discovery

Every diner in South Africa can browse every ARMenu restaurant in one place, filtered by cuisine, city and popularity.

Google-optimised menu pages

Every menu is submitted to Google's sitemap and tagged with structured Restaurant data.

Beautiful share previews

When shared on WhatsApp, guests see a custom-branded card in your accent colour — not a generic ARMenu logo.

Cross-restaurant loyalty

Diners who fell in love with a dish at another restaurant see your version recommended. Traffic flows both ways.

Live viewer social proof

When multiple diners view your menu at the same time, they see "6 people viewing" — subtle, powerful, converts.

Referral codes built in

Every diner gets a unique share code. When their friend orders with it, both save. Growth loop with no marketing spend.

PLATFORM & TRUST

Built for restaurants that **demand reliability.**

Your point of sale can't go down. Neither can we. Every layer of ARMenu is designed for the reality of a busy South African service — patchy WiFi, load-shedding, tablets that overheat, diners who tap twice.

POPI compliant

Full data-controller structure, cookie consent, deletion endpoint, transparent privacy policy.

Enterprise-grade cloud

Data lives in EU-Central Frankfurt on managed Postgres, encrypted at rest and in transit.

Nightly automated backups

Every table backed up every night to a separate cloud region. If anything ever went wrong, we can restore.

Public status page

armenu.co.za/status — every component's live health, always visible.

Enterprise security headers

Content Security Policy, X-Frame protection, referrer policy, rate limiting.

Built in South Africa, for South Africa

Rand pricing. Local timezone. WhatsApp integration. Local support.

PROGRESSIVE WEB APP · WORKS OFFLINE · ZERO DOWNLOADS · REAL-TIME SSE · WEB PUSH

WHY ARMENU — VS THE ALTERNATIVES

Not a marketplace.
Not a PDF.
Not a commission grab.

Most "digital menu" solutions are either a link to a PDF, a QR shortcut to your website, or a delivery marketplace that takes a cut of every order. ARMenu is none of those.

CAPABILITY	ARMENU	OTHERS
Life-size AR preview of every dish	✓ Included	Rare
Kitchen board with station routing	✓ Included	Extra module
Multi-tablet kitchen sync	✓ Included	Rare
Guest profile that follows across restaurants	✓ Included	Never

Group ordering	✓ Included	Never
Waitlist & walk-in queue	✓ Included	Rare
Menu preview before publish	✓ Included	Rare
Staff scheduling & performance	✓ Included	Separate app
Commission on orders	**0%**	15–30%
Your restaurant owns the guest data	✓ Yes	No
Guest downloads required	✓ None	Often yes
Works on any smartphone	✓ Yes	iOS/Android only

GETTING STARTED

Live on **your first table.** *Under an hour.*

Onboarding is quick, hands-on, and guided. You'll be watching your first guest scan and order before the day is out.

1

Sign up

Your restaurant, your logo, your accent colour.

2

Import your menu

Upload a CSV or start from a curated template. We'll help.

3

Add dish photos

Any smartphone photo works. We handle the rest.

4

Print your QR codes

One click per table. Cut-and-stick, or laminated tent cards.

5

Go live

Watch your first guest scan and order. That's it.

TOTAL SETUP TIME

Under 60 minutes.

First order within 24 hours.

GUARANTEED.

1 hr	*0*	*Ro*	*24/7*
TO LAUNCH	STAFF TRAINING	HARDWARE NEEDED	SUPPORT DURING ROLLOUT

LET'S TALK

See your food. *Before they orde*

A short conversation, a menu walk-through, a live demo at your table. That's all it takes to see what ARMenu does for your restaurant.
